🌐 **What is WHOIS?**
Think of WHOIS like a phone book for websites. Just like you can look up who owns a house by checking property records, WHOIS lets you look up who owns a website domain name.

📱 **Real-World Example:**
Imagine buying a phone number. When you do, you need to:
- Register your name
- Provide your contact info
- Say how long you want to keep it
- List when you got it

🔍 **What You Can See in This Example:**
1. The website is registered with a company called IONOS SE
2. It was registered on February 4, 2020
3. It will expire on February 4, 2026
4. It has special computers (called name servers) that help people find the website
5. Most personal information is hidden (marked as "REDACTED FOR PRIVACY") to protect the owner's privacy

🛡️ **Privacy Note:**
Just like you might not want your phone number public, many website owners keep their personal information private. That's why you see "REDACTED FOR PRIVACY" instead of actual contact details.

Is there anything specific about WHOIS that you'd like me to explain further?
